# 1. Purpose

The public-use data from the Longitudinal Employer-Household Dynamics Program, including the Quarterly Workforce Indicators (QWI) and Job-to-Job Flows (J2J), are available for download with the following data schema. These data are available as Comma-Separated Value (CSV) files through the LEHD website's Data page at <https://lehd.ces.census.gov/data/> and through LED Extraction Tool at <https://ledextract.ces.census.gov/>.

This document describes the file and directory naming schema for LEHD-provided CSV files.

## 2. Schema for Data File Contents

The contents (schema) for LEHD data files are described in [lehd\\_public\\_use\\_schema.pdf](#). The contents (schema) for shapefiles are described in [lehd\\_shapefiles.pdf](#).

## 3. Extends

This version modifies a portion of the structure of the metadata. Many files compliant with LEHD or QWI Schema v4.2 or lower will also be compliant with this schema, but compatibility is not guaranteed.

## 4. Supersedes

This version supersedes V4.6.0, for files released as of R2020Q4.

## 5. Basic Filename Schema

All files are preceded by a file type definition, followed by additional information on the aggregation level of the file, or some other identifier.

```
[TYPE]_[DETAILS].[EXT]
```

pseoe\[institution state/all].csv	pseo	PSEO Earnings data broken by institution state or a single file with all institutions.
pseof\[institution state/all].csv	pseo	PSEO Flows data broken by institution state or a single file with all institutions.

## 5.1. QWIPU from the LED Extraction Tool

Files downloaded through the LED Extraction Tool at <https://ledextract.ces.census.gov/> follow the following naming convention:

```
[type]_[id].[EXT]
```

where [id] is the Request ID (a unique string of characters) generated every time Submit Request" is clicked. The ID references each query submission made to the database.

## 5.2. Metadata for QWI and J2J data files (version.txt)

Metadata accompanies the data files, identifying provenance, geographic and temporal coverage. These files follow the following naming convention:

```
version_[type].txt
```

where each name component is described in more detail [below](#).

## 5.3. Metadata for J2JOD files

Because the origin-destination (J2JOD) data link two regions, we provide an auxiliary file with the time range for which cells containing data for each geographic pairing may appear in a data release. The reference region will always be either the origin or the destination. These files follow the following naming convention:

```
j2jod_[geography]_avail.csv
```

where each name component is described in more detail [below](#).

# 6. Directory Paths

Downloadable data files are organized on the download server (at the time of this writing: <https://lehd.ces.census.gov/data/>) in directories organized as follows:

```
SERVER/data/[PRODUCT]/[RELEASE]/[GEOHI][ /[TYPE] ]/{files}
```

where [\[PRODUCT\]](#), [\[RELEASE\]](#), [\[GEOHI\]](#), and [\[TYPE\]](#) are each described below. [\[TYPE\]](#) is optional.

# 7. Description of Naming Components

## 7.1. Release

A **release** is defined by the calendar year quarter when data production occurs. It is thus generically constructed as

```
R[YEAR]Q[QUARTER]
```

where [\[YEAR\]](#) is the 4-digit year and [\[QUARTER\]](#) the single-digit calendar year quarter (1-4).

## 7.2. Types and Products

## 7.3. geohi

( [naming\\_geohi.csv](#) )

- the lower-case alphabetic FIPS or postal state code based on [FIPS PUB 5-2](#) (see also [label\\_stusps.csv](#) for upper-case variants).
- the numeric CBSA code corresponding to the metropolitan areas (see [label\\_geography\\_metro.csv](#))
- It is expanded to encompass additional codes denoting national coverage, or a collection of states.

For **directories**, files at the CBSA level are collected under a single **metro** directory.

all	Collection of all available states
us	National data (50 states + DC)

type	Description
metro	Indicates collection of CBSA-level files ( <b>directory names only</b> )
