**Important**

This specification is draft. Feedback is welcome. Please write us at [lars.vilhuber@census.gov](mailto:lars.vilhuber@census.gov).

## 1 Purpose

The public-use data from the Longitudinal Employer-Household Dynamics Program, including the Quarterly Workforce Indicators (QWI) and Job-to-Job Flows (J2J), are available for download with the following data schema. These data are available as Comma-Separated Value (CSV) files through the LEHD website's Data page at <http://lehd.ces.census.gov/data/> and through LED Extraction Tool at <http://ledextract.ces.census.gov/>.

This document describes the data schema for LEHD files. LEHD-provided SHP files are separately described in [lehd\\_shapefiles.pdf](#). For each variable, a set of allowable values is defined. Definitions are provided as CSV files, with header variable definitions. Changes relative to the original v4.0 version are listed [at the end](#).

## 2 File naming

The naming conventions of the data files is documented in [lehd\\_csv\\_naming.pdf](#).

## 3 Extends

This version reimplements some features from V4.0. Many files compliant with LEHD or QWI Schema v4.0 will also be compliant with this schema, but compatibility is not guaranteed.

## 4 Supersedes

This version supersedes V4.0.5, for files released as of RXXXX.

## 5 Basic Schema

Each data file is structured as a CSV file. The first columns contain [\[identifiers\]](#), subsequent columns contain [\[indicators\]](#), followed by [status flags](#).

### 5.1 Generic structure

Column name
[ Identifier1 ]
[ Identifier2 ]
[ Identifier3 ]
[ ... ]
[ Indicator 1 ]
[ Indicator 2 ]
[ Indicator 3 ]

Column name
[ ... ]
[ Status Flag 1 ]
[ Status Flag 2 ]
[ Status Flag 3 ]
[ ... ]

Note: A full list of indicators for each type of file are shown below in the [Indicators](#) section. While all indicators are included in the CSV files, only the requested indicators will be included in data outputs from the LED Extraction Tool.

## 5.2 Identifiers

Records, unless otherwise noted, are parts of time-series data. Unique record identifiers are noted below, by file type. Identifiers without the year and quarter component can be considered a series identifier.

### 5.2.1 Mapping for Identifiers

( [lehd\\_mapping\\_identifiers.csv](#) )

Each of the released files has a set of variables uniquely identifying records (*Identifiers*). The table below relates the set of identifier specifications to the released files. The actual CSV files containing the identifiers for each set are listed after this table. Each identifier can take on a specified list of values, documented in the section on [Categorical Variables](#).

identifiers	QWI	NQWI	J2J	J2JR	J2JOD	LODES
lehd_identifiers_qwi	1	1				
lehd_identifiers_j2j			1	1		
lehd_identifiers_j2jod					1	

### 5.2.2 Identifiers for j2j

( [lehd\\_identifiers\\_j2j.csv](#) )

Variable	Type	label
periodicity	Char(1)	Periodicity of report
seasonadj	Char(1)	Seasonal Adjustment Indicator
geo_level	Char(1)	Group: Geographic level of aggregation

quarter	Num	Time: Quarter

### 5.3 Indicators

The following tables and associated mapping files list the indicators available on each file. The '*Indicator Variable*' is the short name of the variable on the CSV files, suitable for machine processing in a wide variety of statistical applications. When given, the '*Alternate name*' may appear in related documentation and articles. The '*Status Flag*' is used to indicate publication or data quality status (see [Status Flags](#)). The '*Indicator Name*' is a more verbose description of the indicator.

#### 5.3.1 National QWI and state-level QWI (QWIPU)

## 5.4 Variability measures

The following tables and associated mapping files list the variability measures available on each file. The '*Variability Measure*' is the short name of the variable on the CSV files, suitable for machine processing in a wide variety of statistical applications. When given, the '*Alternate Name*' may appear in related documentation and articles. The '*Variable Name*' is a more verbose description of the variability measure.

Six variability measures are published:

- Total variability, prefixed by vt\_
- Standard error, prefixed by st\_, and computed as the square root of Total Variability
- Between-implicate variability, prefixed by vb\_
- Average within-implicate variability, prefixed by vw\_
- Degrees of freedom, prefixed by df\_
- Missingness ratio, prefixed by mr\_

A missing variability measure indicates a structural zero in the corresponding indicator. This is currently not associated with a flag.

## 6.14 Geography

### 6.14.1 Geographic levels

Geography labels for data files are provided in separate files, by scope. Each file *label\_geography\_SCOPE.csv* may contain one or more types of records as flagged by *geo\_level*. For convenience, a composite file containing all geocodes is available as *label\_geography.csv*. The 2015 vintage of *Census TIGER/Line geography* is used for all tabulations as of the R2015Q4 release.

Shapefiles are described in a [separate document](#).

( *label\_geo\_level.csv* )

<i>geo_level</i>	<i>label</i>	<i>description</i>	<i>sourceurl</i>
B	Metropolitan/Micropolitan (complete)	Identifies 5-digit CBSA code provided by the Census Bureau's Geography Division	<a href="http://www.census.gov/population/metro/">http://www.census.gov/population/metro/</a>
C	Counties	Identifies 5-digit FIPS code	<a href="https://www.census.gov/geo/reference/codes/cou.html">https://www.census.gov/geo/reference/codes/cou.html</a>
M	Metropolitan/Micropolitan (state part)	Identifies 7-digit code constructed from the 2-digit state FIPS code and the 5-digit CBSA code provided by the Census Bureau's Geography Division	
N	National (50 States + DC)	Custom code using 00 to denote national scope	
S	States	Identifies 2-digit FIPS code (also called "ANSI" codes)	<a href="https://www.census.gov/geo/reference/ansi_statetables.html">https://www.census.gov/geo/reference/ansi_statetables.html</a>
W	Workforce Investment Areas	2-digit state FIPS code and the 6-digit WIA identifier provided by LED State Partners	

### 6.14.2 National and state-level values

( *label\_fipsnum.csv* )

The file *label\_fipsnum.csv* contains values and labels for all entities of *geo\_level* N or S, and is a summary of separately available files.

<i>geographylabel</i>	<i>geo_level</i>
00 National (50 States + DC)	N
01 Alabama	S
02 Alaska	S
04 Arizona	S
05 Arkansas	S
06 California	S
08 Colorado	S

### 6.14.3 Detailed state and substate level values

Note: cross-state CBSA, in records of type `geo_level` = M, are present on files of type `label_geography_XX.csv`. A particular cross-state CBSA will appear on multiple files.

## 6.15 Aggregation level

( [label\\_agg\\_level.csv](#) )

Measures within the J2J and QWI data products are tabulated on many different dimensions, including demographic characteristics, geography, industry, and other firm characteristics. For Origin-Destination (O-D) tables, characteristics of the origin and destination firm can be tabulated separately. Every tabulation level is assigned a unique aggregation index, represented by the `agg_level` variable. This index starts from 1, representing a national level grand total (all industries, workers, etc.), and progresses through different combinations of characteristics. There are gaps in the progression to leave space for aggregation levels that may be included in future data releases.

`agg_level` is currently reported only for J2J data products.

The following variables are included in the [label\\_agg\\_level.csv](#) file:

Variable	Description
<code>agg_level</code>	index representing level of aggregation reported on a given record
<code>worker_char</code>	demographic (worker) characteristics reported on record
<code>firm_char</code>	firm characteristics reported on record. These will be the characteristics of the destination firm in O-D tabulations
<code>firm_orig_char</code>	characteristics of origin firm reported on record (O-D tabulations only)
<code>j2j</code>	Flag: Aggregation level available on J2J counts tables
<code>j2jr</code>	Flag: Aggregation level available on J2J rates tables
<code>j2jod</code>	Flag: Aggregation level available on J2J O-D tables
<code>qwi</code>	Flag: Aggregation level available on QWI

The characteristics available on an aggregation level are repeated using a series of flags following the standard schema:

- [geo\\_level](#) - geographic level of table
- [ind\\_level](#) - industry level of table
- `by_` variables - flags indicating other dimensions reported, including ownership, demographics, firm age and size.

These flags will be expanded to include origin characteristics in a later release. A shortened representation of the file is provided below, the complete file is available in the link above.

<code>agg_level</code>	<code>worker_char</code>	<code>firm_char</code>	<code>firm_orig_char</code>	<code>j2j</code>	<code>j2jr</code>	<code>j2jod</code>	<code>qwi</code>	<code>geo_level</code>

## 7 Status flags

( [label\\_flags.csv](#) )

Each status flag in the tables above contains one of the following valid values. The values and their interpretation are listed in the table below.

**Important**

Note: Currently, the J2J tables only contain status flags *-1* and *1*. Status flags with values 10 or above only appear in online applications, not in CSV files.

flag	label
-2	no data available in this category for this quarter
-1	data not available to compute this estimate
1	OK
5	Value suppressed because it does not meet US Census Bureau publication standards.
6	Value calculated from other released measures - no significant distortion
7	Value calculated from other released measures - some of which have significantly distorted data
9	Data significantly distorted - fuzzed value released
10	Aggregate of cells - no significant distortion
11	Aggregate of cells not released because component cells do not meet U.S. Census Bureau publication standards
12	Aggregate of cells - some of which have significantly distorted data

## 8 Changes

For a description of how schema files are versioned, see [main directory](#).

### 8.1 This version (revisions)

- 2016-09-26: Initial release
- 2016-10-06: Fixed a rendering issue with an empty column.
- 2016-10-06: Modified the label for firm age and firm size to contain mention of "Not Available For Public-Sector Firms" -

### 8.2 Version 4.1 from 4.0.5

- 2016-08-08: Implemented select changes from V4.1d-draft: Key changes are
- Changed structure of state-level geography labels (flat directory structure)
- Describes National QWI files and J2J files (both of which are still in beta), added J2J, National QWI spec
- added additional geo\_level for CBSA (complete), additional description, sources in label\_geo\_level.csv
- 2016-08-10: Added description, definition of SHP files
- 2016-08-11: Modified Indicator Names for J2J variable metadata.
- 2016-08-31: adjusted AL, AR, GA, IA, KY, LA, MN, MS, NM, PA, TN, TX metropolitan areas for 2016 geo vintage

#### 8.2.1 In more detail

- added geohi category of ALL, US, add naming\_geohi.csv
  - added naming convention for additional files
  - added agg\_level variable
  - Changes to name of variable schema files (qwipu → qwi), addition of variability and rate variable schema files.
  - Addition of a column identifying the type of variable on QWI
  - Renamed file from QWIPU\_Data\_Schema.pdf to lehd\_public\_use\_schema.pdf
  - Addition of variable schema description for J2J
  - Added a extension component [ext] to the file naming convention to reflect availability of Excel files (and PDF files)
  - Updated documentation-generating scripts to the latest. Documents are now identified by date, not revision
  - Added a concatenation of geography files as label\_geography.csv.
  - Added a column geo\_level to all label\_geography\_\* files
  - Changed fipsnum to force readin of FIPS as character, include geo\_level, US.
  - Added additional legal values for firmage and firmsize, as used by J2J
  - Added Federal government to files (for National QWI)
  - Clarified description of filenames components
  - Sundry small additional changes, building out the schema
  - Changing of naming convention for to-be-released files based on federal government from fg → of. At this time, no such files have been released.
