> This document is not an official Census Bureau publication. It is compiled from publicly accessible information by Lars Vilhuber (Labor Dynamics Institute, Cornell University). Feedback is welcome. Please write us at lars.vilhuber@cornell.edu.

The public-use data from the Longitudinal Employer-Household Dynamics Program, including the Quarterly Workforce Indicators (QWI) and Job-to-Job Flows (J2J), are available for download with the following data schema. These data are available as Comma-Separated Value (CSV) files through the LEHD website's Data page at http://lehd.ces.census.gov/data/ .

This document describes the data schema for LEHD files. For each variable, a set of allowable values is defined. Definitions are provided as CSV files, with header variable definitions. The naming conventions of the data files is documented in lehd_csv_naming.html. Changes relative to the original v4.0 version are listed at the end.

1   Basic Schema

Each file is structured as a CSV file. The first columns contain [identifiers], subsequent columns contain [indicators], followed by status flags.

1.1   Generic structure

Column name
[Identifier1]
[Identifier2]
[Identifier3]
[…]
[Indicator 1]
[Indicator 2]
[Indicator 3]
[…]
[Status Flag 1]
[Status Flag 2]
[Status Flag 3]
[…]

Note: A full list of indicators for each type of file are shown below in the Indicators section. While all indicators are included in the CSV files, only the requested indicators will be included in data outputs from the LED Extraction Tool.

1.2 Identifiers

Records, unless otherwise noted, are parts of time-series data. Unique record identifiers are noted below, by file type. Identifiers without the year and quarter component can be considered a series identifier.

1.2.1 Mapping for Identifiers

(lehd_mapping_identifiers.csv)

Each of the released files has a set of variables uniquely identifying records (*Identifiers*). The table below relates the set of identifier specifications to the released files. The actual CSV files containing the identifiers for each set are listed after this table. Each identifier can take on a specified list of values, documented in the section on Categorical Variables.

identifiers	QWI	NQWI	J2J	J2JR	J2JOD	LODES
lehd_identifiers_qwi	1	1				
lehd_identifiers_j2j			1	1		
lehd_identifiers_j2jod					1	

1.2.2 Identifiers for j2j

(lehd_identifiers_j2j.csv)

1.3 Indicators

The following tables and associated mapping files list the indicators available on each file. The *'Indicator Variable'* is the short name of the variable on the CSV files, suitable for machine processing in a wide variety of statistical applications. When given, the *'Alternate name'* may appear in related documentation and articles. The *'Status Flag'* is used to indicate publication or data quality status (see Status Flags). The *'Indicator Name'* is a more verbose description of the indicator.

1.3.1 National QWI and state-level QWI (QWIPU)

(variables_qwi.csv)

Indicator Variable	Alternate name	Status Flag	Indicator Name
Emp	B	sEmp	Beginning-of-Quarter Employment: Counts
EmpEnd	E	sEmpEnd	End-of-Quarter Employment: Counts
EmpS	F	sEmpS	Full-Quarter Employment (Stable): Counts
EmpSpv	Fpv	sEmpSpv	Full-Quarter Employment in the Previous Quarter: Counts
EmpTotal	M	sEmpTotal	Employment - Reference Quarter: Counts
HirA	A	sHirA	Hires All: Counts (Accessions)
HirN	H	sHirN	Hires New: Counts
HirR	R	sHirR	Hires Recalls: Counts
Sep	S	sSep	Separations: Counts

1.4   Variability measures

The following tables and associated mapping files list the variability measures available on each file. The *'Variability Measure'* is the short name of the variable on the CSV files, suitable for machine processing in a wide variety of statistical applications. When given, the *'Alternate Name'* may appear in related documentation and articles. The *'Variable Name'* is a more verbose description of the variability measure.

Six variability measures are published:

- Total variability, prefixed by vt_

- Standard error, prefixed by st_, and computed as the square root of Total Variability

- Between-implicate variability, prefixed by vb_

- Average within-implicate variability, prefixed by vw_

- Degrees of freedom, prefixed by df_

- Missingness ratio, prefixed by mr_

A missing variability measure indicates a structural zero in the corresponding indicator. This is currently not associated with a flag.

2.13 Geography

2.13.1 Geographic levels

(label_geo_level.csv)

geo_level	label
C	Counties
M	Metropolitan/Micropolitan
N	National (50 States + DC)
S	States
W	Workforce Investment Areas

Geography labels are provided in separate files by state. Note that cross-state CBSA will have state-specific parts, and thus will appear in multiple files. A separate label_fipsnum.csv contains values and labels for all entities of geo_level *n* or *s*, and is a summary of separately available files.

2.13.2 National and state-level values

(label_fipsnum.csv)

geography	label
00	National (50 States + DC)
01	Alabama
02	Alaska
04	Arizona
05	Arkansas
06	California
08	Colorado

46	South Dakota
47	Tennessee
48	Texas
49	Utah
50	Vermont
51	Virginia
53	Washington

2.13.3 Detailed state and substate level values

For a full listing of all valid geography codes (except for WIA codes), see http://www.census.gov/geo/maps-data/data/tiger.html. Note about geography codes: Four types of geography codes are represented with this field. Each geography has its own code structure.

- State is the 2-digit FIPS code.

- County is the 5-digit FIPS code.

- Metropolitan/Micropolitan codes are constructed from the 2-digit state FIPS code and the 5-digit CBSA code provided by the Census Bureau's Geography Division.

  - In the QWI, the metropolitan/micropolitan areas are the state parts of the full CBSA areas.

  - In J2J, tabulations are based on the complete metropolitan/micropolitan area.

• The WIA code is constructed from the 2-digit state FIPS code and the 6-digit WIA identifier provided by LED State Partners.

The 2014 vintage of Census TIGER geography is used for all tabulations as of the 2014Q3 release.

3 Status flags

(label_flags.csv)

Each status flag in the tables above contains one of the following valid values. The values and their interpretation are listed in the table below.

> **!** **Important**
> Note: Currently, the J2J tables only contain status flags *-1* and *1.* Status flags with values 10 or above only appear in online applications, not in CSV files.

---

flag	label
-2	no data available in this category for this quarter
-1	data not available to compute this estimate
1	OK
5	Value suppressed because it does not meet US Census Bureau publication standards.
6	Value calculated from other released measures - no significant distortion
7	Value calculated from other released measures - some of which have significantly distorted data
9	Data significantly distorted - fuzzed value released
10	Aggregate of cells - no significant distortion
11	Aggregate of cells not released because component cells do not meet U.S. Census Bureau publication standards
12	Aggregate of cells - some of which have significantly distorted data

4 Changes

4.1 This version from previous releases of this document

- 2015-02-25: corrected flag values

- 2015-02-25: documents are now identified by date, not revision

- 2015-03-10: Correction of the TIGER vintage that is used for geographic references

- 2015-03-11: Added URL for J2J

- 2015-03-11: Correction of typo in type naming convention, rename of naming_fipsalpha.csv to naming_geohi.csv to be consistent.

- 2015-03-17: Changing of naming convention for to-be-released files based on federal government from fg → of. At this time, no such files have been released.

- 2015-04-24: Changes to alternate name of SepSnx and EmpSpv, tentative rate names

- 2015-04-26: Changes to name of variable schema files (qwipu → qwi), addition of variability variable schema files.

4.2 Version 4.1b-draft from 4.0

- added J2J, National QWI spec

- added geohi category of ALL, US

- added definitions of variability measures

- added definitions of rates on separate file

- added naming convention for additional files
